Full Stack Developer with a background in selling technological solutions, which has allowed me to have a complete vision of the business. Knowledge of backend and frontend technologies including JavaScript, SQL, Sequelize, Express, MongoDB, Postgress, Node.js, React, and Redux. With an excellent predisposition for teamwork, dynamism, capacity for continuous learning and enthusiasm. I have worked on individual and group projects with agile methodologies. Always willing to continue acquiring knowledge in technology. B1 intermediate level of English.

Technologies

Programming languages: JavaScript.

Framework tools: Express.js, Node.js, Sequelize, Mongoose, React-Redux.

Database: SQL, Postgress, MongoDB.

Tools: Git, Jira, Confluence, Slack.

Agile: Scrum.

Projects

Full Stack Web Developer - Project Notices

January 2023

1. Development of a news website, only visual and aesthetic.
2. Implementation of functionalities such as dynamic navbar management, detailed cards, background and footer.
3. Use of cloudflare, Font Google, Font gstatic, CSS y HTML.

Full Stack Web Developer - Individual Project Countries

Agosto 2023

Henry Bootcamp, Buenos Aires, Argentina.

4. Development of an application in order to display country cards with their capitals, population, continents, flags and activities.
5. Implementation of functionalities such as alphabetical ordering of countries, region, tourist activity and number of inhabitants. Search by name and activity and create new activities.

1. Use of technologies such as JavaScript, React, Redux, Express, Node.js, PostgreSQL, Sequelize, CSS, and HTML.

Back End Developer - Final Project "ProjUnity"
Henry Bootcamp, Buenos Aires, Argentina.

Sep-Oct 2023

2. Development of an e-commerce platform for freelance developers where they can interact with users, share their code, sell it, donate it and contribute to the community.
3. Integration of shopping carts, purchase orders, authentication of both new and third-party users, notifications, registration of comments, creation of new projects and management of orders.
4. Key contribution in the development of the server/database with the assembly of routes, assembly of models, payment market, payments and purchase orders, user comments, creation of projects and deployment of the database.
5. Use of technologies such as JavaScript, React-Redux, Next.js, Express, Node.js, PostgreSQL, Sequelize, CSS, ChakraUI, and HTML. Use of Cloudinary, MercadoPago, Passport, Railway and Vercel.

Academic Experience

Full Stack Developer
Henry Bootcamp, Buenos Aires, Argentina.

January/2023-Present

1. Compliance with the schedule of assigned projects, homeworks, checkpoints, classes and detailed documentation.
 2. Language: Proficiency in JavaScript and ECMAScript 2015 for the development of efficient and interactive web applications.
 3. Frontend: Manipulating the DOM and using CSS to create attractive and responsive interfaces.
 4. Backend: Implement an application's server development, logic, and functionality, ensuring efficient performance and robust data management. Ensuring accurate and concrete answers from the server.
 5. Frameworks: In the development of the implemented frontend as I use React-Redux. From the backend side, we use Node.js as a runtime environment and Express as a framework, handling good modularization and effective code reading.
 6. Database: Handling Sequelize as an ORM for efficient queries and interactions using JavaScript-to-database (SQL) functions with model and relationship handling.
- Testing: Ability to perform unit testing, troubleshooting, reading, and respective use of the documentation.
